

# Transportation Service Web Application

# Background

- ▶ Client-server architecture
- ▶ Provides transportation services for goods in Austria
- ▶ The company has a fleet of vehicles with various characteristics (maximal weight and size) and parked in different places
- ▶ Customer requests the service, the server calculates the price and generates automatically an offer to the customer
- ▶ After the customer accepts the offer, the server issues moving orders to vehicles and drivers
- ▶ React for frontend, Spring boot for backend, MySQL as database

# 3 roles

- ▶ Manager: registers drivers and vehicles of the company by specifying some details for each of them
- ▶ Driver: sees the booking details if a booking is assigned to him. When he starts driving, he clicks the button “Start” in his webpage, when he ends driving, he clicks button “End”
- ▶ Customer: choses pickup and destination address of the good to be transported, specifies weight, length, width, height of the good and can accept the offer generated by the server

# Assigning a vehicle and driver

- ▶ Vehicle within 50km from pickup address and with a smaller volume is preferred (otherwise the nearest vehicle from pickup address is chosen). Weight, size and availability should also be satisfied.
- ▶ The driver who is the closest to the assigned vehicle's parking address is chosen. Availability should also be satisfied.

# Cost calculation

- ▶  $0.7 * \text{distance(in km)} + 0.05 * \text{weight(in kg)} + 20 * \text{volume(in m)}$
- ▶ Distance includes the road made by the vehicle from the parking address, picking the good and driving to the destination
- ▶ Exact road distance is fetched from OpenStreetMap Nominatim API

# Map

- ▶ With the help of OpenStreetMap, providing us with a list of route points in the map.
- ▶ A thread updates the current index (position in that list with route points) in the database
- ▶ When customer navigates to the map, the current index is fetched from the database and the current position of the vehicle is shown in the map

## Welcome to Transver

**Pickup Address:**

Salzburg, 5020, Austria

**Destination Address:**

Vienna, Austria
